UU AI SOCIETY

Partnership Overview

UPPSALA UNIVERSITY

01 WHO WE ARE

UU AI Society is a student-led, non-profit organization at Uppsala University that brings together students with an interest in technology, particularly artificial intelligence, in the pursuit of learning and applying these technologies.

UUAIS was founded in April 2025 by a small founding team that set out to build a more technical, professional, and ambitious student community in Uppsala, one that raises the bar for what a student organization can be, and connects the most driven students with the companies shaping the future of AI.

Since then, UUAIS has grown into one of Uppsala's most active technical student societies, known for the quality and ambition of its events and for building genuine, lasting relationships with its partners.

MEMBERS	EVENTS THIS YEAR	LINKEDIN	INSTAGRAM

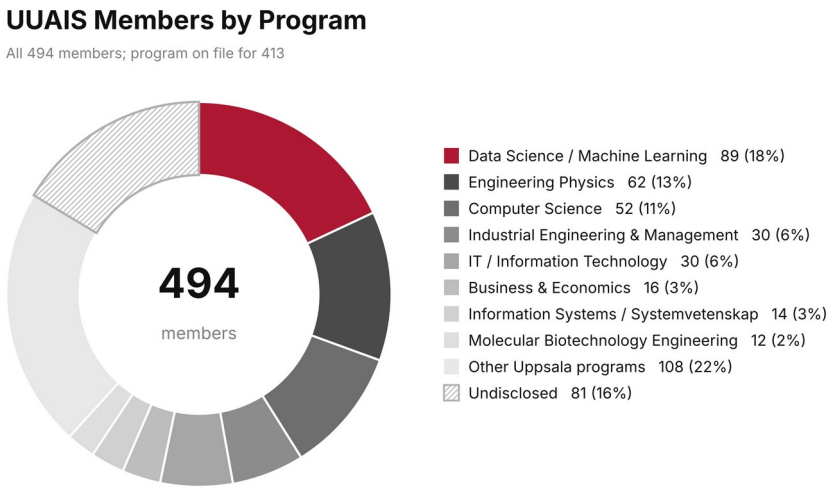

Note: UUAIS recently moved to a new events platform to formally track average attendance and application rates going forward. Reliable per-event figures are therefore not yet available for all past events, but turnout has been consistently strong; the Lovable SheBuilds Evening and the local round of the National AI Startup Competition, for example, both drew turnout and engagement well above what is typical for a single-evening student event.

02 COMPANIES WE HAVE WORKED WITH

ANTHROP\C · NVIDIA · aws · Lovable · ERICSSON

03 WHO OUR MEMBERS ARE

Of our 494 members, 413 have a program on file. The most represented programs, with the remainder shown as undisclosed:

04 EVENTS WE HAVE HOSTED

Over the past year, UUAIS hosted 12 events, comprising 4 hackathons, 6 workshops, 1 guest lecture, and 1 study visit, together with partners including Unibap Space Solutions, Impact Solution, Modulai, Epiminds, Scaleout Systems, and Uppsala Municipality. A sample of recent events:

- **National AI Startup Competition 2026**, the local round of Sweden's premier student AI buildathon, run with Anthropic, NVIDIA, AWS, and Lovable, and hosted at Impact Solution's HQ
- **The Big Hackathon Weekend**, a full weekend hackathon
- **Lovable SheBuilds Evening**, a build-focused hackathon evening
- **AI in Space**, a workshop in collaboration with Unibap Space Solutions
- **Federated Machine Learning**, a hands-on workshop with Scaleout Systems
- **AI for Supply Chain Design**, a technical evening with Modulai
- **Fireside chat** with founders and founding engineers at different startups
- **Study visit** to Ericsson's Stockholm headquarters
- **Research paper discussions**, a recurring series covering topics such as “Attention Is All You Need” and continual learning paradigms

Attendees come primarily from the engineering faculty, with growing participation from business and economics students. Digital reach has grown substantially over the year (LinkedIn: 287 to 1,178 followers; Instagram: 150 to 613 followers), reflecting the society's expanding footprint in and outside Uppsala.

05 WHAT WE CAN OFFER

UUAIS gives partners direct access to a targeted, highly engaged network of AI-focused students, spanning Data Science, Machine Learning, Engineering, Finance, Law, and related programs, along with full operational support so partners can focus on content rather than logistics.

- A curated audience of ambitious, technically minded students actively looking to connect with industry
- End-to-end event planning and on-the-ground execution: marketing, registration, logistics, and follow-up
- Visibility through the UUAIS website and growing social media presence, before, during, and after each event
- A genuine, long-term relationship rather than a one-off transaction; many partners return for repeat collaborations

06 TWO WAYS TO WORK WITH US

There are two complementary ways to partner with UUAIS. Companies are welcome to pursue either, or both.

1. Host an Event

Design and run an event together with UUAIS, tailored specifically to your goals, whether recruiting, brand visibility, or engaging with Uppsala's AI community. Every event is built around what makes sense for your organization: the topic, the format, and the level of involvement are all shaped together with you. Formats we regularly run include:

- **Lunch lectures**: a low-commitment way to introduce your organization and work to students
- **Evening workshops**: hands-on technical sessions where students work directly with your tools, data, or challenges
- **Case evenings**: students work through a real or simplified business or technical case from your organization
- **Fireside chats and panel discussions**: informal, conversational formats featuring your team
- **Study visits**: students visit your office to experience your culture and day-to-day work firsthand
- **Hackathons**: from single-evening formats to full weekend buildathons, with your team as host, judge, or mentor
- **Guest lectures and research talks**: deeper technical or research-oriented sessions

2. Become a Partner or Sponsor

For organizations looking for an ongoing relationship with UUAIS rather than a single event, we offer partnership tiers that provide consistent visibility and access to our community across the semester or year, including logo placement, distribution of job postings, and opportunities to engage with students across multiple events.

We are happy to walk through the specifics of our partnership tiers separately.

Whichever path you choose, every collaboration with UUAIS is tailored to fit your organization's specific goals and constraints.

07 CONTACT

We would be glad to explore what a collaboration between your organization and UU AI Society could look like. Reach out to us to set up a conversation.
